Profile

As a Unity developer, I have been responsible for project development from initial concept to release as a lead developer, working closely with other team members, integrating services, and resolving critical issues. I possess strong skills in designing efficient architectural solutions, integrating third-party systems, and working with APIs. Throughout my career in this field, I have gained experience leading development teams, collaborating with various departments, managing workflows, and making important decisions in critical situations.

Hard skills

Unity: Zenject, DOTween, ScriptableObject, Cinemachine, Timeline, NavMesh, Addressables, URP, FishNet, Particle system, Animations, Shaders, Spine, Optimization

C#: OOP, SOLID, Patterns

Project management: Git, Jira, Figma, Trello, Confluence, P4V Helix

Other: AI Agents, Android Studio, Firebase, AdMob, Unity Ads, Playfab, Docker

Soft skills

- Bias for action
- Adaptive
- Critical Thinking
- Attention to Detail
- Communication
- Team player

Employment History

Self-Employed
C# Unity Developer
Ukraine

November 2025 - Present

KEVURU Games
C# Unity Developer
Ukraine

March 2023 - November 2025

Smart Project Games
C# Unity Developer
Ukraine

February 2022 - February 2023

Raccoons Games
C# Unity Developer
Ukraine

August 2021 - January 2022

Education

University of Telecommunication
Bachelors of Software Engineering

2021 – 2025

Course from University
Unity Development

2021-2022

Course from the Small Academy of Sciences
Create your game in Unity

Demonstrated a high level of knowledge during training

2021

Course at the European School of Programming
Fundamentals of C++ Programming

2018 – 2019

Self-Employed

C# Unity Developer | November 2025 – Present

Worked on freelance and independent Unity projects, including maintenance of existing codebases, gameplay development, refactoring, and full-cycle development of original mobile game prototypes. Used AI-assisted development tools to accelerate research, implementation, debugging, and workflow optimization.

Key Responsibilities:

- Fixed technical issues, refactored existing codebases, and implemented gameplay features for client projects;
- Developed gameplay mechanics and core systems for a confidential commercial project involving digital assets;
- Created original mobile games from concept to publisher-ready builds, including Tunnel Racing and Rocket Evolution;
- Integrated mobile analytics, attribution, and advertising monetization services, including Unity Analytics, CAS.AI, Tenjin, and AppsFlyer;
- Used Claude Code, ChatGPT Desktop, and Android Studio to accelerate development, debugging, technical research, and Android build preparation.

Tech Stack:

C#, Unity, Claude Code, ChatGPT Desktop, AI Agents, Android Studio, Zenject, URP, DOTween, Firebase, Cinemachine, Timeline, Unity Analytics, CAS.AI, Tenjin, AppsFlyer

KEVURU Games, Ukraine

C# Unity Developer | March 2023 – November 2025

Worked on a large-scale production project, focusing on system-level improvements, UI architecture, and development process optimization. Took increased responsibility within the team, including temporary leadership, coordination, and client-facing communication. Actively collaborated with senior developers to refine existing systems and improve overall development velocity.

Key Responsibilities:

- Improved and refactored existing gameplay and UI systems using internal tools and established project architecture;
- Designed and implemented a scalable popup/screen UI system based on artist-provided references;
- Acted as a substitute team lead during the absence of the main lead (led team calls, synchronized tasks, communicated with stakeholders);
- Collaborated closely with senior developers to optimize systems and accelerate feature delivery;
- Maintained high code quality standards and contributed to internal documentation;
- Supported team-wide workflow and version control processes using Perforce (P4V Helix).

Tech Stack:

C#, Unity, AI Agents, Zenject, URP, Addressables, DOTween, Firebase, Cinemachine, Timeline, P4V Helix, Docker, PlayFab, FishNet

Smart Project Games, Ukraine**C# Unity Developer | February 2022 – February 2023**

Worked within the R&D direction, developing core gameplay systems and integrating them with backend services. Played a key role in technical collaboration across teams and helped unblock production during high-pressure phases.

Key Responsibilities:

- Developed core gameplay systems and integrated them with backend services (REST APIs);
- Collaborated closely with Technical Artists to synchronize visuals and gameplay logic;
- Resolved critical technical blockers and accelerated delivery pipelines;
- Built R&D prototypes and introduced technical solutions that improved team efficiency.

Tech Stack:

C#, Unity, URP, Asset Bundles, DOTween, REST API, Swagger, Cinemachine, Timeline

Raccoons Games, Ukraine**C# Unity Developer | August 2021 – January 2022**

Gained foundational commercial experience in Unity development by independently creating hyper-casual games from concept to publishing. Focused on mastering the full development cycle, basic architecture, monetization, and production stability.

Key Responsibilities:

- Developed hyper-casual games from scratch to release;
- Implemented core gameplay mechanics and basic game architecture;
- Integrated AdMob for monetization;
- Performed testing, debugging, and stability improvements;
- Documented game systems for future maintenance and handover.

Tech Stack:

C#, Unity, AdMob, OOP, SOLID, Design Patterns, Git, Zenject
